

My Special Adventure

One night, I had a dream about travelling on a spaceship.

The spaceship first took us to Mercury. It was the planet closest to the Sun, which was also the fastest planet in our solar system.

The next planet we visited was Venus. It was the hottest among all planets. Its temperature was so high that we had to leave as soon as we could. Therefore, we didn't have enough time to figure out why Venus was hotter than Mercury.

Our space trip had finally ended. It was fun exploring different planets! When could I have another wonderful dream again?
